Data Engineer

Data Engineer with experience building Apache Spark ETL pipelines, production data validation systems, and AWS cloud applications in finance and healthcare. Experienced with large-scale data ingestion, production monitoring, data quality enforcement, and machine learning retrieval systems.

Certifications

- AWS Cloud Practitioner, AWS — 2025
- AI and ML Certification, Great Learning — 2025 - 2026

Technical Skills

- Data Engineering: PySpark, Apache Spark, SQL, ETL Pipelines, Data Validation
- Cloud & Infrastructure: AWS Lambda, ECS/EKS, S3, RDS, CloudWatch, DynamoDB
- Machine Learning: Scikit-Learn, OpenCV, Embeddings, LLMs, RAG systems, Vector Databases

Projects

Freelance Data Engineer | **Self Employed**
Austin, TX | **01/2025 - Present**

Developed data engineering and machine learning projects involving ingestion pipelines, retrieval systems, analytics, and model evaluation using Python and Scala. (Python, Scala)

- *AWS Certification Coach: Developed an AWS certification platform with automated answer grading and detailed feedback, achieving over 90% grading accuracy on internal evaluation datasets.*
- *AWS Documentation RAG: Built end-to-end retrieval pipeline for AWS documentation using web crawling and Vector Database; Deployed the final Streamlit app in AWS environment.*
- *Helmet Detection - Data Quality Case Study: Built image classification CNN models from different source datasets and generated a cross-validation report across all models using a holdout dataset.*
- *LLM Evaluation Pipeline: Built a medical assistant Llama model and evaluated the model on answer accuracy and instruction fidelity.*
- *Stress vs. Physical Activity Correlation: Analyzed relationships between stress levels and physical activity using Kaggle dataset.*

Professional Experience

Software Developer | **Finra**
Rockville, MD | **10/2022 – 12/2024**

Developed and validated scalable ETL pipelines using Apache Spark to ensure accurate data ingestion. *(Java, Scala, AWS)*

- *Generated Apache Spark test datasets to validate AWS Step Functions workflows across distributed microservices.*
- *Developed Spark-based ETL pipelines supporting analytical workloads over large-scale production datasets.*
- *Wrote anomaly detection scripts to enforce consistency across large-scale financial data feed.*
- *Performed root cause analysis investigations for dead letter queue errors in production system.*
- *Progressed to final round in company-wide Deep Racer competition and participated in person competition.*

Pipeline Engineer | **b.well Connected Health**
Austin, TX | **09/2020 – 09/2022**

Supported production healthcare data pipelines and infrastructure using AWS and automated validation frameworks. (PyTest/ Selenium).

- *Designed and maintained AWS-based infrastructure supporting automated data and API validation workflows.*
- *Developed serverless monitoring solutions using AWS Lambda to track pipeline health and detect failures in near real-time.*
- *Automated validation processes for healthcare application data, reducing manual verification effort and improving reliability.*
- *Contributed to CI/CD pipelines to ensure consistent deployment and validation of data processing systems.*

Education

- Post Graduate Certificate in AI and Machine Learning, University of Texas (2026)
- Bachelor of Computer Science, Texas State University (2011)

Daniel Aaron Levenstein

Austin, TX| 512-885-5925 | daniel@levenstein.me | LinkedIn Profile

Automation Engineer **| Apiture**
Austin, TX **| 02/2019 – 08/2020**

Conducted integration testing to validate interactions between backend APIs and front-end sites. (Java/ Node)

- *Utilized PostgreSQL to create, update, and manage mock datasets, ensuring comprehensive test coverage.*

Sr. Automation Engineer **| Conduent**
Austin, TX **| 06/2011 – 01/2019**

Ran the QA team single-handed while the company was going through an acquisition. (Java)

- *Implemented JMeter performance tests for applications, ensuring application scalability.*
- *Maintained Jenkins builds for deploying dev and QA code, utilizing bash and Linux skills.*
