Daniel Aaron Levenstein

https://github.com/DanielLevenstein | daniel@levenstein.me | 512-885-5925

Software engineer with 10+ years of experience building backend systems, distributed data pipelines, validation frameworks, and cloud automation. Experienced with Java, Scala, Python, Spark, SQL, and AWS. Delivered production systems for financial and healthcare platforms, including workflow validation, data-quality monitoring, serverless infrastructure, and CI/CD automation.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript/Node.js, Bash

Backend & Data: Apache Spark, PySpark, ETL pipelines, data validation, PostgreSQL, REST APIs

Cloud & DevOps: AWS Lambda, Step Functions, S3, RDS, DynamoDB, CloudWatch, ECS/EKS, Jenkins, Linux

Testing & Quality: PyTest, Selenium, Playwright, data generation, integration testing, anomaly detection

AI & ML: Scikit-Learn, OpenCV, LLMs, RAG systems, vector databases, LangGraph, Graphviz

CERTIFICATIONS

- AWS Cloud Practitioner, AWS - 2025
- AI and ML Certification, Great Learning - 2025-2026

PROJECTS

Freelance Software Engineer | Self Employed

Austin, TX | 01/2025 - Present

- **LLM Evaluation Pipeline:** Built an evaluation workflow for a Llama-based medical-assistant prototype that scores answers for quality and instruction-following against a defined test set and documented the failure modes it exposed.
- **AWS Certification Coach**: Built and deployed a study app that has learners answer in full sentences before revealing multiple-choice options, grades answers with a local semantic-similarity model at 98% grade-band accuracy and links every miss to the AWS docs that cover it.
- **AWS Documentation RAG:** Generated answers to questions about AWS services using AWS documentation as the source of truth for all answers.
- **Campaign Knowledge Graph:** Used Graphviz to transform unstructured data into knowledge graphs using entity extraction and relationship mapping.
- **TicTacTaire** (client project): Delivered a playable solitaire web app with custom game rules for a local game designer, deployed on Render.

PROFESSIONAL EXPERIENCE

Software Developer | FINRA

Rockville, MD | 10/2022 - 12/2024

- Built Java and Scala Spark pipelines for large-scale financial data ingestion using Kafka workflow which processed ingestion workflow across AWS.
- Developed distributed frameworks to validate AWS Step Functions workflows spanning multiple microservices.
- Implemented anomaly-detection and data-quality checks that identified inconsistencies across financial data feeds.
- Diagnosed production dead-letter-queue failures across service boundaries and coordinated remediation strategies.

Pipeline Engineer | b.well Connected Health

Austin, TX | 09/2020 - 09/2022

- Developed AWS Lambda monitoring services that detected healthcare pipeline failures in near real time surfacing issues before downstream impact.
- Automated API and application validation using PyTest and Selenium, reducing manual verification effort.
- Supported CI/CD workflows for repeatable deployment, integration testing, and production monitoring of data services.

Automation Engineer | Apiture

Austin, TX | 02/2019 - 08/2020

- Built Java and Node.js integration-test frameworks validating interactions across backend APIs and frontend applications.
- Expanded PostgreSQL test-data coverage to support broader integration testing and more reproducible defect diagnosis.
- Investigated failures across application and API boundaries, producing reproducible defect reports used by engineering teams.

Sr. Automation Engineer | Conduent

Austin, TX | 06/2011 - 01/2019

- Developed JMeter performance-testing suites to evaluate application scalability, identify bottlenecks, and support capacity planning.
- Maintained Jenkins build and deployment workflows for development and QA environments using Bash and Linux tooling.

EDUCATION

- Post Graduate Certificate in AI and Machine Learning, University of Texas - 2026
- Bachelor of Computer Science, Texas State University - 2011
