

Customized AI Chatbots

Building AI Chatbots small enough to run on your infrastructure without exposing any private company data.

Smart Document Search

The screenshot shows the 'AWS Document RAG' chatbot interface. At the top, it says 'Welcome to the RAG-based chatbot! You can ask questions based on the context of provided documents.' Below this are 'Load Model' and 'Ask Question' buttons. A text input field contains the question: 'How do you open a port on a ec2 instance in AWS?'. Below the input, a green bar indicates 'Model loaded.'. The chatbot's response is a numbered list of 10 steps for opening a port on an EC2 instance.

AWS Document RAG

Welcome to the RAG-based chatbot! You can ask questions based on the context of provided documents.

Load Model Ask Question

Enter your question:

How do you open a port on a ec2 instance in AWS?

Model loaded.

Chatbot's response:

To open a port on an EC2 instance in AWS, you can follow these steps:

1. Log into your Amazon Web Services (AWS) account and navigate to the ECS console at <https://console.aws.amazon.com/ecs/>.
2. Click on "Instances" from the left-hand menu.
3. Select the instance that has the port you want to open, and click on its name in the list of instances.
4. On the right-hand side of the page, find the "Security Groups" section.
5. Locate the security group for your EC2 instance by searching for it using the search bar provided at the top of the screen.
6. Click on the "Edit Security Group" button to open the edit dialog box.
7. In the left-hand panel, click on "Add Rule".
8. Select the protocol (TCP or UDP) and the port number you want to open for your instance from the dropdown menus provided at the top of the screen.
9. Click on the "Save" button in the bottom right corner of the dialog box.
10. Your EC2 instance should now be able

I built a cloud-based system that turns a company's documents into a smart, searchable helper. It reads and indexes documents, then uses AI to find the most relevant bits and craft clear answers to questions—so anyone can get accurate, context-aware responses from internal manuals, FAQs, or reports without digging through files.

Personal Study Assistant

The screenshot shows the 'Personal Study Assistant' interface. At the top, it says 'Cloud Practitioner | Networking | Easy'. Below this is a prompt: 'Explain which AWS service or feature should be used to provide scalable DNS routing and health-check-based routing for applications.' The 'Your answer' section contains the text: 'You should use Route 53 to create scalable DNS routing and health checks for your application.' Below this are 'Evaluate Answer' and 'Next Question' buttons. The 'Score' section shows 'Grade A'. The 'Source multiple-choice question' section lists four options: A. Use Amazon Route 53, B. Use Amazon CloudWatch Logs, C. Use AWS Config, and D. Use Amazon Inspector. The 'Detailed answer' section explains that Amazon Route 53 is used for scalable DNS routing and health-check-based routing for applications.

Cloud Practitioner | Networking | Easy

Explain which AWS service or feature should be used to provide scalable DNS routing and health-check-based routing for applications.

Your answer

You should use Route 53 to create scalable DNS routing and health checks for your application.

Evaluate Answer Next Question

Score

Grade A

Source multiple-choice question

AWS Documentation: Amazon Route 53

During exam preparation, explain which AWS service or feature is best suited to provide scalable DNS routing and health-check-based routing for applications.

Detailed answer

Use Amazon Route 53 to provide scalable DNS routing and health-check-based routing for applications.

Source documentation

AWS Documentation: Amazon Route 53

A. Use Amazon Route 53.

B. Use Amazon CloudWatch Logs.

C. Use AWS Config.

D. Use Amazon Inspector.

I created a personalized study app that helps people prepare for AWS exams by generating practice questions, tracking strengths and weaknesses, and recommending what to study next. It uses cloud services to store progress and deliver quizzes reliably, making exam prep more efficient and tailored to each learner.
