

AI Developer

Building AI Chatbots small enough to run on your infrastructure without exposing any private company data.

Smart Document Search

I built a cloud-based system that turns a company's documents into a smart, searchable helper. It reads and indexes documents, then uses AI to find the most relevant bits and craft clear answers to questions—so anyone can get accurate, context-aware responses from internal manuals, FAQs, or reports without digging through files.

Personal Study Assistant

I created a personalized study app that helps people prepare for AWS exams by generating practice questions, tracking strengths and weaknesses, and recommending what to study next. It uses cloud services to store progress and deliver quizzes reliably, making exam prep more efficient and tailored to each learner.

Freelance Data Engineer

Helping organizations transform data into actionable insights and AI powered solutions.

Analyze Business Datasets

- Analyze dataset to get an edge in your business.
- Build dashboards and visualizations in python.
- Deliver interactive web app for stakeholders.
- Automate reporting workflows and reduce manual effort.

Customized AI Chatbots

- Create domain-specific AI assistants for your business.
- Reduce time spent searching internal documentation.
- Deploy AI solutions without sending sensitive data to third parties.

Services Offered

- Data Analysis & Visualization
- AI Application Development
- Custom Document Search Solutions
- Interactive Dashboard Development

Smart Document Search

Indexes company documents and finds the most relevant data sources to fit your custom business use case.

Technology Stack:

Python, SQL, Pandas, Scikit-learn, PySpark, Streamlit, OpenCV, LLMs, RAG, Vector Database, LangChain

AWS Certification Coach

Practice explaining AWS—not just recognizing the right answer.

AWS Certification Coach is a lightweight study app that turns exam-style AWS scenarios into freeform recall practice. Learners answer in their own words, receive an A–F grade, and get structured feedback on the concepts they covered, missed, or misunderstood.

Why it's interesting

- **Recall over recognition.** Freeform prompts ask learners to explain why an AWS service or design is the best fit.
- **Local, transparent evaluation.** A deterministic semantic scorer recognizes service aliases, concept coverage, and common wrong choices—without an API key.
- **Original, reviewable content.** Questions are generated offline from self-authored AWS scenarios, with separate training, validation, and test data.
- **Built like a real product.** Streamlit UI, Python scoring, Docker packaging, automated quality metrics, and Render deployment.

CURRENT SCOPE 118 questions • 3 certification tracks • 15 domains • freeform and code/configuration review

Live Demo: <https://aws-certification-coach-latest.onrender.com>

AWS Certification Coach

Cloud Practitioner | Database | Easy

Explain which AWS service or feature should be used to provide a fully managed NoSQL key-value and document database with low-latency access.

Your answer

AWS DynamoDB can be used to create a fully managed NoSQL database.

Evaluate AnswerNext Question

Score

Grade A

Source multiple-choice question

AWS Documentation: Amazon DynamoDB

Detailed answer

Use Amazon DynamoDB to provide a fully managed NoSQL key-value and document database with low-latency access.

Source documentation

AWS Documentation: Amazon DynamoDB

> Submit feedback

A. Use Amazon DynamoDB.

B. Use Amazon Redshift.

C. Use Amazon EFS.

D. Use AWS Glue.

Exam Coverage:

- AWS Cloud Practitioner
- AWS Certified Developer
- AWS Solutions Architect

Features:

- Dynamic Question Generation
- Detailed Grading Heuristic.
- Grading Precision over 90%

Semantic Diagnostic Accuracy

Metric	Accuracy
Semantic Precision	100%
Semantic Recall	91%
Exact Letter Accuracy	88%
